

### Troubleshooting:

- Ensure json and json-lock files are present and up to date
- Ensure express app is properly configured
- Ensure instance is running

### Architecture Diagram

### Steps to pipeline creation:

- 1) Create the repo. Ensure all necessary files (json, json-lock, appropriate express app)
- 2) Deploy using Elastic Beanstalk
- 3) Link github repo to Codebuild (must authorize)
- 4) Edit the buildspec file
- 5) Create a new pipeline
- 6) Link to the github repo (must authorize) and ensure using webhooks
- 7) Configure the deploy stage (using Beanstalk as the provider)
- 8) Add more stages (if required - not done here)
